Your score on the questionnaire indicates that you are currently experiencing some of the symptoms associated with imbalances in the energy production pathways. The findings on both the questionnaire and the genetic reports will be used to calculate your need for specific nutrients. In turn, these nutrients can influence your mood and your energy level.

The supplement recommendations are based on the results of your genetic results, including the questionnaire. Make sure your patients answer as honestly as possible to get correct recommendations. It is preferable to discontinue supplements for at least 2 days before taking the questionnaire for the first time. On followup visits, you can have them take the questionnaire while on the supplements to see where you might be missing some support.

It's important that you consider your answers carefully and answer honestly to get a correct analysis with your genetic report. If you are unsure about what a question means consult your practitioner. Sometimes it's helpful to ask your spouse or friend for feedback about some of the questions.

If you get NO supplement recommendations on this report, it generally means you are on the right track with your diet, lifestyle and nutrient support. However, it is still recommended that you consult your practitioner for additional support if they feel it is needed.

Why do we use Physician Lines of supplements? It is always preferable to use the highest quality of supplements. Those that are called "physician lines" are available from practitioners only, but they are of the highest quality. These physician lines must pass more rigorous testing

and evaluation; they must also meet label claim, meaning they must have in them what the label says they contain. This standard does not hold true of many of the over-the-counter brands. Many “over-the-counter” brands of these supplements contain heavy metals, insecticides, and other contaminants. These brands are not regulated as thoroughly as are the physician lines.

NOTE: These supplements are meant to be taken together as a "genetically designed multiple". If you run out of any of the supplements, stop taking them until you have all of them together.

To order your supplements contact your practitioner.
